PROJECTS

XploreLanka Project

In our app when the user searches a place it will predict and tells the user is the weather is good, is it crowded and is it a holiday or not. I made the model for the weather prediction using

1. **Python**
2. **Keras**
3. **Tensorflow**

In the same project for the frontend I made the Schedule screen. When the user searches a place and if the place is okay user can add it to the Schedule. User can edit, delete each place. We used **React-Native**.
